CORE VALUES

We constantly develop and we always look for new ways and solutions.

Yet we always stay true to our core values, represented by the three words that really sum everything up.

Saying them is quite easy. Living them is quite a challenge in a fast-moving world of constant change. But we strive!

BRAND HISTORY

PROJOB's modern history dates back to 1998 when founder and designer Tore Parment took his knowledge and experience from the outdoor equipment market and applied it on a new breed of workwear. The ambition has always been to create functionality where it really is needed: In everyday physical work situations.

Tore is still Head of Design at PROJOB, which is now owned by New Wave

Group, a Swedish Company Group with many internationally well-known brands in its portfolio.

Craft Sportswear is a sister company with a brand that is synonymous to the Three-Layer-Principle and the two organisations have a close cooperation with each other.

History is important, since it shows why we are here and where we plan to go next.

SUSTAINABILITY

We have the possibility to contribute and make a difference through our global operations. PROJOB is a part of New Wave Group. New Wave Group is working with social and environmental sustainability under the term CSR (Corporate Social Responsibility). As our customer, you are supporting this work.

New Wave Group has two main strategies to decrease our environmental impact and to cut our emission of greenhouse gases. First of all, we must influence the transportation companies that we are working with. Our membership in "Clean Shipping Index" aims to impact the shipping companies to use cleaner vessels by ranking the most high-performing ships. The Group works with some of the largest transportation companies on the market, all of which have environmental programs in place for their operations.

Secondly, we always strive to improve our internal logistics and work methods. Within our group of companies, we club together as much as possible of our shipments and transportations. In addition to protecting the environment, sustainable solutions can also contribute to the streamlining of our operations.

WE LIKE SUSTAINABLE PRODUCTS

New Wave Group believes in classic design and good quality products - a concept that will never be out-of-fashion. We hope you will enjoy our products for a long time. All products can be customized to your precise demand, which is a good way to ensure long-lasting use and sustainable consumption.

It is important to New Wave Group that our products are safe and free from restricted chemicals. New Wave Group is a member of the Swedish Chemicals Group at Swerea IVF to receive the most updated information on legislation and developments. This supports our active work to reduce and replace chemicals in line with best available technique. All our suppliers must follow the requirements in our Restricted Substance List. The list has been designed in accordance with legislations such as REACH, but also taking into account industry recommendations and standards. As a result, our requirements are often stricter than the applicable legislation.

Learn more about our Code of Conduct and our sustainability work on New Wave Group's webpage: www.nwg.se/en.

IMPROVING WORKING CONDITIONS

New Wave Group is never far away from the manufacturing of our products. Being represented on site enables us to have a close partnership with our suppliers and to actively monitor their business operations. We have a CSR-team, which consists of full-time staff dedicated to visit our suppliers, monitor and support them with various social and environmental topics.

As a member of BSCI, New Wave Group has adopted the BSCI Code of Conduct. It contains requirements on minimum wage, working hours and the prohibition of child labour, among several other requirements from international conventions like to ILO Conventions and the Declaration of Human Rights. New Wave Group has a commitment towards BSCI to engage our

suppliers in third party examination by independent auditors. Having both internal and external audits is a quality assurance to us. We strive for constant improvements and continuous development.

New Wave Group is a signatory member of the pioneering Accord on Fire and Building Safety in Bangladesh. The Accord is a binding contract between brands, international and local trade unions and NGOs. Its aim is to make all garment factories in Bangladesh safe workplaces, which includes a program of safety inspections and a commitment to ensure that the necessary repairs and renovations are carried out. The Accord will have significant impact on the daily lives of millions of textile workers in Bangladesh. We are proud to be a part of this project!

VENT AIR® is wind and waterproof with breathability. VENT AIR® keeps the body dry and cool while protecting against the forces of weather. The material consists of three-component high-tech weave, a functional material with a coating on the inside and a water-repellent treatment on the outside.

VENTAIR™ 

Cordura® is DuPont's brand of extremely durable polyamide material. It is three times as strong as standard polyamide, up to seven times as strong as cotton and yet is fine and supple. We use it primarily as reinforcement in places that are exposed to hard wear.

CORDURA®

YKK is a market-leading brand in zippers. The products are of high quality and set the standard for other players in the market.

YKK

3M Scotchlite™ person reflex material makes you extra visible when it's dark and the view is bad. The material reflects bright white when it's lit up by the headlights of a vehicle, also when the wearer stands beside the road. 3M Scotchlite reflex material for protective garments exceeds the highest reflex category of the European standards for reflective protective garments, EN471, as well as all strict, standardised tests.

3M

Coats epic has set a new standard in the thread market. It consists of a core of polyester fibre around which is spun yet another polyester fibre. The combination makes for a thread with maximal tensile strength, which results in seams with extreme durability.

Duraflex is the trade mark of the high-quality buckles used in PROJOb clothes, belts and carrying systems.

PrimaLoft® is a brand of patented synthetic microfiber thermal insulation material, originally developed for military use.

 DURAFLEX®

CRAFT® is a world leading producer of functional sports apparel and innovative supplier of three-layer-principle garments. Craft provides the fabrics and know-how to our workclimate underwear.

CRAFT® 

Materials with 37.5°-technology help to keep your body at the ideal temperature 37,5°C. The material contains naturally active particles, permanently embedded in the fiber which, when you get hot, removes sweat in the vapor stage before liquid sweat forms. 37.5° is a trademark of Cocona, Inc.

COTTON

Cotton is a soft and comfortable natural material. It insulates and ventilates. One of cotton's advantages is that it does not melt when exposed to flames and sparks and that it is difficult to set fire to. Our heavy-duty cotton twill is extra sturdy and durable. This is possible because we ourselves are involved in and direct development from fibre to final production.

POLYESTER/COTTON

The combination of cotton and polyester have proven perfect for making long-lasting garments. The breathability of cotton combined with the durability and colourfastness of polyester make garments in polyester/cotton keep their shape and colour longer. Clothes in polyester/cotton are therefore an excellent choice for hard work that places great demands on both the wearer and the garments.

SPUNDYED

Using the traditional dyeing method, the finished fabric is dipped in a dye bath, before being rinsed and then dried. With the spun dyed process, the colour pigment is added before the fibre is spun and the fabric subsequently woven/knitted.

In this way the colour becomes part of the fibre. The woven/knitted fabric achieves much better colour fastness, making it better able to withstand washing, wearing, sunlight and bleaching.

In environmental terms, spun dye is much more eco-friendly than the traditional method of dyeing. As it eliminates a stage in the dyeing process, consumption of energy, chemicals and water is significantly reduced.

PRO DRY™

ProDry™ are the materials you wear closest to your skin. They transport moisture and allow it to pass to the outer layer. With ProDry™ there you don't have to have damp and cold garments next to your body.

PRO THERMAL™

Pro Thermal™ are the materials that afford effective insulation against both heat and cold. The materials detect and dispose of surplus heat at the same time that they keep out unneeded cold. Pro Thermal™ keeps body temperature at an even and pleasant level all day.

PRO VENT™

Pro Vent™ are the materials with high breathability. They let out moisture and superfluous heat. They withstand rain, snow and wind. Pro Vent™ are resilient, protective materials worn on the very outside.

PRO TEC™

Pro Tec™ are the materials that afford effective protection against exterior effects. They are very resistant to wear and to tearing. Pro Tec™ is suited to extremely strenuous work in rough environments.

LADIES AHEAD

PROJOB MAKES SURE THAT THE MOST ESSENTIAL GARMENTS COME IN LADIES' CUT

In Scandinavia in particular, but also in the rest of the world, women are increasingly becoming part of the crew also in work fields that previously were almost exclusively operated by men.

This is very positive and it also creates a growing need for adaptations in cut. We are gradually expanding our collection with ladies' cut garments and over time we aim to produce all relevant articles with adapted fit and this year we can present seven new items.

From page 122 we have gathered all such products for easier overview and there are references on all male/unisex articles that have a corresponding ladies' article.

Shorts 2555, one of seven new garments with ladies' cut in Projob 2023 collection

WE INVEST HEAVILY IN CERTIFIED CLASS 1* GARMENTS

We see an increasing demand in visibility garments in the lighter end of the the classification range (see also Enhanced visibility on next fold) and for 2023 we have invested heavily in this category (EN ISO 20471 Class 1).

Class 1 typically works well, and gives sufficient visibility and protection in e.g indoor work environment and in the transport sector. We also see a wider use in "non-traditional" sectors and in private use, where these functional and comfortable and resonably discreet garments are ideal for work at home, and evening walks.

* EN ISO 20471 Class 1 is the lowest classification of visibility with a minimum area of 0,14m² flourescent and 0,10 m² reflective.

SHOUTOUTS '23

THREE NEW HIGH VISIBILITY PANTS, DEVELOPED FROM WELL-PROVEN FAVOURITES

6573

The very popular model 5551, now EN ISO 20471 classified!

6571

The Kevlar® knee reinforced model 5550 elevated to visibility!

6527

The classic 5559 developed with 37,5 body temperature technology!

"Why change a winner?" you might ask. Well, we feel the winners are the best products to develop into future winners.

These three pants are all good examples of when products that have proven themselves in action evolve into new garments with additional functionality.

Since we feel these are extraordinary good items, we like you to take a closer look at them in the chapter Visibility Clothes on page 60.

See you there. Litterally.

ENHANCED VISIBILITY: UNCLASSIFIED

There are actually working situations where some enhanced visibility is wanted but full EN ISO 20471 visibility is neither required nor desired for different causes, e.g. that reflections may affect machinery light sensors.

This category, which is not covered within the EN ISO 20471 classification system, it carries, however, enough visibility features to significantly improve safety. The visibility parts are generally over the shoulders, which in practice keeps those surfaces away from the worst wear and dirt.

Primarily it is all about enhanced durability: Our construction collection takes it to new standards. Reinforced Kevlar panels and details, Coats' Epic threads and seams that can take the daily wear and tear. It's proven through elaborate testing.

Secondly, beneath it all, we have all the regular ProJob characteristics: The functionality in terms of practical and innovative unique details like our pants' knee protection pockets that adjusts very well to movement and can be washed with the cushions still inside. Comfort meets comfort, so to speak. Stretch panels adds further mobility to the wearer.

If it's going to be tough, it's got to be ProJob!

PANTS - CONSTRUCTION

5550

WAISTPANT STRETCH

Waistpants in full stretch for maximum freedom of movement and comfort. Modern fit. 4-way stretch over thighs and seat, 2-way stretch on the back side of knees and outside of lower leg. CORDURA

PRO TEC™

Flexible and soft fabrics such as stretch and softshell, with discretely integrated vents are essential functions to take everybody working with service and transport through the workday.

For drivers, we strongly advocate the removal of unnecessary pockets like seat pockets. If they contain things it can distress the spine and the pocket seams wear cause friction on the chair/seat fabric. We provide pants with no back pockets!

PANTS - TRANSPORT / SERVICE

New!

Favorite pant 5551 now available in white for both men and women.

Stretchy and flexible, what more to ask for?

Read more on p. 132

This category of workers are distinguished by white garments, simply because the overwhelmingly prevailing color they work with is white and the stains will not show. It also facilitates the use of stronger washing chemicals without visibly bleaching or discolouring the garment's colour. The dense fabric also blocks colour and putty from bleeding through.

Like in all other categories, we add stretch where needed to provide functional and good looking workwear.

Combine your waistpants from chapters Construction and Transport / Service with a nice looking t-shirt, sweatshirt and jacket for a complete PROJOB look.

All the reinforcements united in one full-packed chapter for improved overview. When gathered, it becomes obvious how much our collection covers in terms of functionality and how many versions there are in the different styles.

There is a Swedish idiomatic expression, "It's hard to see the forest for all the trees", and this is the reason we rearranged our most important product group separately in this catalogue".

All jackets and sweatshirts united in one full-packed chapter for improved overview.

Guide EN ISO 20471

Reflective clothing is personal protective equipment. Personal protective equipment are products that are designed to be used by a person for protection against health and safety risks.

The special demands placed on personal protective equipment in Europe are described in EN-norms. Products that pass these basic safety requirements are allowed to carry the obligatory CE-mark. In order for a safety product to be approved and marked with the CE mark, it must have been tested and certified by an authorized organisation.

HIGH-VIS CLOTHES FOR PRO USERS

These have to be CE-marked and approved according to the norm EN ISO 20471 (earlier EN 471). The norm describes among other things what colours are permitted, where on the clothes the reflecting material is to be placed, and which information that must accompany the clothes. The design of the clothes must also follow certain criteria in order to achieve the best possible visibility. In the norm there are three classes. The norm specifies how much fluorescing cloth and how big the reflective area reflective clothes of each class must have.

Minimum area with high visible material, m²

	Class 1	Class 2	Class 3
Background material	0,14	0,50	0,80
Reflective material	0,10	0,13	0,20

Class 1

This gives the lowest level of protection. The total fluorescent area must be at least 0.14m² and the reflective area 0.10m². May only be used if there is little contact with a few vehicles and/or slow moving traffic.

Class 2

Gives a much better protection than class 1, especially in daytime, twilight and fog. The total fluorescent area must be at least 0.50m² and the reflective area 0.13m². Class 2 is used in harbours, on railways, building sites, parking places, cross country searches, load bearing vehicles and other places where class 3 is not required.

Class 3

This gives the highest level of protection. The total fluorescent area must be at least 0.80m² and the reflective area 0.20m². To be used in the proximity of fast moving traffic.

 Certification: EN ISO 20471 Class 2
 Color: yellow/black-11, orange/black-1799
 Size: XS-4XL

Guide EN 343

Clothing that carries an EN 343 certification is tested for protection against bad weather.

The latest version of EN 343:2019 involves testing seams for water penetration in classes 1-4 and resistance to water vapor classes 1-4, with 4 being the highest class. The garments must achieve results on both tests to be labeled with the EN 343 symbol.

- Protection against ingress of water: 1-4, where class 4 gives the best waterproofness
- Water vapor resistance (breathability): 1-4, where class 4 provides the best breathability
- Effect of high pressure water drops from above (this is optional)

The results are affected by the construction of the garment, where an unlined garment can achieve EN 343 4/4 while a lined garment with the same outer fabric (but with a lining that affects the penetration of moisture) only achieves EN 343 4/1.

The previous standard only had 3 classes, these have now been expanded with a fourth class that requires a higher result. Garments certified according to EN 343 continue to apply. PROJOB Workwear will continuously update certified garments.

Water resistance (WP)

Class 1 ≥ 8000 Pa

Class 2 ≥ 8000 Pa material after pretreatment

Class 3 $\geq 13,000$ Pa material after pretreatment

Class 4 $\geq 20,000$ Pa material after pretreatment

Water vapor resistance (Ret)

The breathing function is indicated in RET value. At a lower RET value, the better respiratory function.

Class 1 Ret > 40

Class 2 $25 < \text{Ret} \leq 40$

Class 3 $15 < \text{Ret} \leq 25$

Class 4 Ret ≤ 15

FUNCTIONAL CLOTHES & UNDERWEAR

6416**SHELLJACKET EN ISO 20471 CLASS 3/2**

Underwear

Inside and out

Underwear in three different qualities, one for every situation.

Yellow themed underwear is for everyday wear.

Orange are advanced underwear with body mapped climate zones for excellent body temperature, during maximum performance.

Red is for our warmest quality made of merino wool, that keeps you warm under the toughest cold.

Neither of our underwears has got side seams to prevent chafing and irritation!

3105

UNDERSHIRT ADVANCED

PRIO. That's short for Priority. When you still want the plain basic quality and function but are ready to give up some other aspects of what workwear offer in abundance today.

If you leave out one out of many pockets, if you move a seam or leave out a loop: It all affects the cost. When we created PRIO we gave priority only to the necessities and left out many of the "good-to-haves". What we got is durable and functional garments for a lower price. Something many companies look for and we are happy to offer.

PRIO SERIES

JACKETS FOR ALL WEATHER CONDITIONS

We highlight four PRIO jackets on this spread: Two with High Visibility, one with lining, one without. And two solid colour jackets with reflex details, also with or without lining.

Additional functionality for all items are detachable hoods, adjustable waist/cuffs and water tightness, as all jackets are certified according to EN 343, the standard certification for wind and water resistance.

 Size: XS-4XL

PRIO SERIES.

Guide EN ISO 20471

Reflective clothing is personal protective equipment.

Personal protective equipment are products that are designed to be used by a person for protection against health and safety risks.

The special demands placed on personal protective equipment in Europe are described in EN-norms.

Products that pass these basic safety requirements are allowed to carry the obligatory CE-mark. In order for a safety product to be approved and marked with the CE mark, it must have been tested and certified by an authorized organisation.

HIGH-VIS CLOTHES FOR PRO USERS

These have to be CE-marked and approved according to the norm EN ISO 20471 (earlier EN 471). The norm describes among other things what colours are permitted, where on the clothes the reflecting material is to be placed, and which information that must accompany the clothes. The design of the clothes must also follow certain criteria in order to achieve the best possible visibility. In the norm there are three classes. The norm specifies how much fluorescing cloth and how big the reflective area reflective clothes of each class must have.

Minimum area with high visible material, m2

	Class 1	Class 2	Class 3
Background material	0,14	0,50	0,80
Reflective material	0,10	0,13	0,20

Class 1

This gives the lowest level of protection. The total fluorescent area must be at least 0.14m² and the reflective area 0.10m². May only be used if there is little contact with a few vehicles and/or slow moving traffic.

Class 2

Gives a much better protection than class 1, especially in daytime, twilight and fog. The total fluorescent area must be at least 0.50m² and the reflective area 0.13m². Class 2 is used in harbours, on railways, building sites, parking places, cross country searches, load bearing vehicles and other places where class 3 is not required.

Class 3

This gives the highest level of protection. The total fluorescent area must be at least 0.80m² and the reflective area 0.20m². To be used in the proximity of fast moving traffic.

6534

WAISTPANTS EN ISO 20471 CLASS 1

Waistpants with holster pockets that can be tucked into side pockets, one with an extra pocket with zipper, and one with loops for tools. Back pockets with flap and Velcro closure. Size: ONE SIZE

WASHING & CARE INSTRUCTIONS

GUIDES & INDEX

WASHING INSTRUCTIONS

WASHING

All our garments are properly tested. Each of them has its own washing instructions, and it's important to follow these. If a garment is always washed with similar colours and at the recommended temperature, it will stay good looking for longer.

If the label says Wash separately in the washing instructions, this means that the colour of the fabric may run – for these garments, which may initially have a little extra dye, it is particularly important to follow the washing instructions to not harm any other garments.

PREWASH

Use the same amount of detergent as in the main wash cycle when prewashing very dirty clothes, skip the prewash cycle completely for less dirty garments to save water and energy. Soaking garments is not recommended due to the damage which undissolved detergent can do to fabrics.

DETERGENT

Always be sure to use the correct amount of detergent – use the detergent packaging as reference. Choose a bleach-free detergent which is suitable for the temperature of the wash.

DRYING

Only tumble dry as a last resort – if you have enough time and space, hanging garments out to dry is recommended as this is better for your clothes. Smooth out the fabric and the seams before hanging up a garment. When tumble drying, the garment should never be completely dried, as this causes unnecessary wear and can cause shrinkage.

CHOOSE SIZE CAREFULLY

Size is extremely important when it comes to work clothes – it affects function, wear and ergonomics. PROJOB clothing is designed with flexibility in mind. Clothes that are the wrong size prevent the wearer from moving around freely. Pockets and other functional details which are used repeatedly during the working day need to be positioned where they can be reached easily. If the clothing is the wrong size, either the positioning of the pockets will force the wearer to make strenuous movements, or the pockets will serve no purpose at all. It's also extremely important for the knee protectors to be in the right place to prevent unnecessary wear. The size also affects how long clothes last – the tighter the garment, the greater the strain on the seams and the fabric.

The PROJOB collection includes sizes to meet every need. Almost all our tops are available in XS–4XL and almost all our trousers are available in C44–C62, D84–D120 and C146–C156.

Shows the recommended wash temperature

Do not tumble dry

Do not iron

Delicate cycle

Tumble dry on low heat (50°C)

Professional leather clean

Do not use chlorine bleach

Cool iron –110°C max, suitable for nylon

Do not wring

Dry-clean, but do not use chemicals stronger than perchloroethylene

Cool iron –150°C max, suitable for polyester/cotton

Hand wash only

Do not dry-clean

Cool iron –200°C max suitable for cotton
